Heytex invests in photovoltaic system

Go live in december 2021

After 6 months of construction, the new 749 kWp photovoltaic system at the main plant of the Heytex Group in Bramsche/Engter was taken into operation in December 2021. The company Sideka Engergietechnik GmbH from Ibbenbüren was commissioned with the planning and installation of this additional energy generation.

The new PV system now produces 600,000 kWh of electricity for the company on an area of 3,750m² and can thus cover 7.5% of the energy requirement in a first step.

"We are pleased with the successful implementation of the project at our site and consider this another step on the Heytex Group's chosen path towards sustainable use of resources," says Plant Manager Marko Rother.

Heytex Bramsche GmbH has already been supplied with 100% green electricity since 2020. The company maintains in-house charging stations for e-bikes and its fleet of e-company cars, thus making its contribution to e-mobility in addition to its subsidized e-bike leasing offer to employees.

Another important step on the way to sustainability.

The Heytex Group is one of the world's leading manufacturers in the development of high-quality and functionalized technical textiles and produces them at five locations on three continents in Germany, Nijverdal, USA and China. With its laminated and coated textiles, Heytex covers a very broad spectrum. The materials are used, for example, as truck tarpaulins, tents, sports mats, oil barriers, roll-up doors, biogas membranes or as advertising media in large-format textile digital printing.
