Personal Announcement: New plant Manager at Headquarters Bramsche

Bramsche/Germany in October 2022

At #heytex we believe that characters take our brand forward.

We are therefore pleased to announce Frank Kopper as the new Plant Manager for our main plant in Bramsche.

Frank Kopper has been part of the #heytex family since September 2022 and brings with him many years of experience in the plastics technology, automotive and construction chemicals sectors, particularly in the latter processes for powders and liquids.

In his new role as Plant Manager of the Heytex Bramsche plant, Frank Kopper is primarily responsible for production, including weaving and finishing, logistics, technical development and maintenance. His focus is on occupational safety and, more importantly, on continuously improving processes along the value chain.

"The most important thing for me is to get to know the company and the people who make it up. It is important to quickly become operational and to find the right measures to be able to secure profitable growth from the factory side," says Kopper.

We are looking forward to working together! Welcome to the team!

Bildunterschrift Frank Kopper, Werk Bramsche, Deutschland

Heytex Bramsche GmbH continues the tradition of the cloth-making town of Bramsche and is the only production company with its own weaving mill in the region. Bramsche has also been recognized by the Chamber of Industry and Commerce as an excellent place to live for skilled workers.

The Heytex Group, headquartered in Bramsche near Osnabrück, has been weaving, laminating and coating technical and functional textiles worldwide for almost 110 years at five production sites on three continents. Ever newer and more sophisticated production and coating processes with alternative raw materials are being used, especially with an increased focus on sustainability. Heytex materials are used, for example, as truck tarpaulins, sports mats, sun sails, tents, stadium roofs, oil barriers, water tanks, rolling gates, gate seals, conveyor belts, bellows, boats, biogas membranes or as advertising media in large-format digital printing.
